Consulting

Oxford is a privately held VA-certified service disabled veteran owned small business. Our consulting practice is centered on providing exceptional technology consultants to the federal government. PMBoK and CMMI based process frameworks form the foundation of our delivery approach, and our management staff has an extensive track record of project delivery success serving the federal government. The company embodies the positive aspects of small business, and strives to provide career opportunities for veterans of our armed forces.

The Service-Disabled Veteran Owned Small Business (SDVOSB) Program

The SDVOSB Program was established in 2004 in order to strengthen opportunities in Federal contracting for service-disabled veteran owned small businesses. The Program honors the extraordinary service rendered to the United States by veterans with service connected medical ratings established in the line of duty.
